

Hawai'i Island

Kohala, Hualalai, Mauna Kea, Mauna Loa and Kilauea Mountain

Legend

Elevation

Hawaii Island, often referred to as the Big Island, is the largest and most geographically diverse of the Hawaiian Islands. It was formed through a series of volcanic eruptions, with Mauna Kea and Mauna Loa, two of the world's largest shield volcanoes, as its prominent features. The island's landscapes range from lush rainforests to arid deserts, and it showcases various ecosystems, from pristine beaches and coral reefs to the unique lava fields in Volcanoes National Park.

Culturally, the island is a blend of native Hawaiian traditions and influences from various immigrant groups. It offers a unique mix of history, natural beauty, and outdoor adventures, making it a sought-after destination for travelers seeking both relaxation and exploration.
